

Care & Maintenance

Glazed Tile

Tiles, once installed, must be properly protected until all construction activity finishes.

To clean tiles properly, use a non-abrasive product (do not hydrofluoric acid and its derivatives). Use a neutral detergent with hot water. Afterwards rinse with just water to remove any remaining detergent.

The use of a sponge or cloth is recommended when cleaning.

Do not use a scourer or any materials that might scratch the surface of the tiles.

Place rugs at entrances to avoid tracked in dirt and abrasives.
